

4 Market Analysis

- The functional beverage market is crowded, but there is still a clear gap between fresh juice and high-protein RTD shakes.
- Many existing protein drinks focus on convenience and macros, yet they often taste heavy, milky or artificial. On the other hand, juices and smoothies taste fresher but usually do not deliver enough protein to support recovery or sustained fullness.
- Our primary research showed that convenience, taste and perceived healthiness matter more than extreme bodybuilding positioning. This makes PROjuice relevant for a wider audience than traditional gym shakes.

PAIN POINT

86% dislike chalky shakes

NEED STATE

79% want on-the-go nutrition

PRICE WINDOW

67% accept NZD 6-7

5 Customer Analysis

Target Customer Profile

- Age 16-30, active, digitally connected and often balancing study, sport, work and commuting.
- They buy quick options from school canteens, gyms, cafes and convenience fridges.
- They care about visible ingredients, lower sugar, bright flavour and packaging that feels modern rather than clinical.
- They often discover new drinks through TikTok, Instagram, peers, coaches and cafe recommendations.

Core Persona

The Busy Active Achiever

A 19-year-old student or 25-year-old young professional who moves between class, work, training and social plans. They want quick energy, enough protein to stay full, and packaging that feels modern enough to post online. They are not necessarily hardcore bodybuilders; they simply want a practical, healthier option that still tastes great.
