

PROjuice

**Real fruit energy.
Serious protein.**

Fruit-protein drinks for students,
athletes and busy young professionals.

PROTEIN

20g per bottle

FORMAT

**330ml chilled
bottle**

POSITIONING

Juice-first taste

What This Report Covers

- A full marketing report structured to match the 17-point class outline shown in the course handout.
- A clear strategy for launching PROjuice as a fruit-protein beverage with strong branding, a realistic channel plan and actionable sales targets.
- Integrated ideas from the YES exemplar, but adapted to suit the product concept and the required marketing-report format.

Contents and Executive Snapshot

The official YES exemplar is a quality reference, but this report follows the fuller 17-point marketing structure shown in class. That means the final document includes market analysis, PESTEL, Ansoff, a marketing budget and a sales-monitoring plan.

Report Structure

1. Description of product or service
2. Vision, mission statement and values
3. SMART business objectives
4. Market analysis
5. Customer analysis
6. Competitor analysis
7. PESTEL analysis
8. SWOT analysis
9. Ansoff matrix
10. Marketing assumptions
11. Marketing objectives
12. Marketing mix
13. Sales forecast
14. Contingency plans
15. Marketing action plan
16. Marketing budget
17. Plan for monitoring sales

Brand Snapshot

UVP

**Fresh like
juice,
functional like**

LAUNCH GOAL

**2,340 bottles in
6 months**

CHANNELS

**Campus, gyms,
cafes and pre-
orders**

Pilot Findings

42 respondents tested the concept

86% disliked chalky or artificial protein

79% drinks wanted a faster on-the-go breakfast or recovery option

Core Message

**A juice-first protein
drink that feels
fresh, functional and
easy to finish.**

1 Description of Product or Service

PROjuice is a chilled 330ml fruit-protein beverage made with real fruit puree, 20g of protein and a cleaner ingredient list than many ready-to-drink shakes. It is designed for people who want the convenience of a grab-and-go drink without the heavy, milky or chalky taste often associated with protein products.

Launch flavours

- Mango Charge - tropical mango and passionfruit
- Berry Lift - strawberry, blueberry and apple
- Apple Lime Pulse - crisp apple, lime and mint

2 Vision, Mission Statement and Values

Vision

To make functional drinks feel naturally energising, fresh and easy to love.

Mission

To deliver a fruit-forward protein drink that combines practical nutrition, bold branding and lower-waste local sourcing.

Values

- Freshness first
- Real performance
- Responsible sourcing
- Bold, optimistic branding

3 SMART Business Objectives

- Launch PROjuice by April 1, 2026 across three channels: pop-up school sales, one gym fridge and online pre-orders.
- Sell 2,340 bottles by September 30, 2026 while maintaining an average gross profit of at least NZD 3.45 per bottle.
- Secure five repeat stockists by June 30, 2026, including two gyms, one cafe and two education/community sites.
- Source at least 25% of fruit input from cosmetically imperfect or surplus local fruit by September 2026.

4 Market Analysis

- The functional beverage market is crowded, but there is still a clear gap between fresh juice and high-protein RTD shakes.
- Many existing protein drinks focus on convenience and macros, yet they often taste heavy, milky or artificial. On the other hand, juices and smoothies taste fresher but usually do not deliver enough protein to support recovery or sustained fullness.
- Our primary research showed that convenience, taste and perceived healthiness matter more than extreme bodybuilding positioning. This makes PROjuice relevant for a wider audience than traditional gym shakes.

PAIN POINT

86% dislike chalky shakes

NEED STATE

79% want on-the-go nutrition

PRICE WINDOW

67% accept NZD 6-7

5 Customer Analysis

Target Customer Profile

- Age 16-30, active, digitally connected and often balancing study, sport, work and commuting.
- They buy quick options from school canteens, gyms, cafes and convenience fridges.
- They care about visible ingredients, lower sugar, bright flavour and packaging that feels modern rather than clinical.
- They often discover new drinks through TikTok, Instagram, peers, coaches and cafe recommendations.

Core Persona

The Busy Active Achiever

A 19-year-old student or 25-year-old young professional who moves between class, work, training and social plans. They want quick energy, enough protein to stay full, and packaging that feels modern enough to post online. They are not necessarily hardcore bodybuilders; they simply want a practical, healthier option that still tastes great.

6 Competitor Analysis

Supermarket RTD protein shakes

Strengths

High protein,
convenient, familiar
format

Weaknesses

Can feel chalky, dairy-
heavy and less fresh

PROjuice edge

**PROjuice leads on
taste freshness and
fruit appeal**

Smoothie and juice bars

Strengths

Fresh image,
customisable, colourful

Weaknesses

Slower service,
inconsistent macros,
higher labour cost

PROjuice edge

**PROjuice is faster,
grab-and-go and
protein-consistent**

Homemade protein smoothies

Strengths

Flexible and lower cost
per serve

Weaknesses

Inconvenient outside
home, preparation time
needed

PROjuice edge

**PROjuice wins on
speed, portability and
impulse purchase**

7 PESTEL Analysis

Political

Need to comply with food handling, labelling and school sale policies.

Economic

Fruit and protein costs can move, so margin discipline and waste control matter.

Social

Consumers want healthier, more natural and more photogenic drinks that fit busy routines.

Technological

Short-form video, QR ordering and loyalty tracking make small brands more scalable.

Environmental

Recyclable bottles and surplus-fruit sourcing support a lower-waste story.

Legal

Claims around nutrition and allergens must be accurate, especially for protein content.

8 SWOT Analysis

Strengths

- Fresh positioning between juice and protein shakes
- Strong visual brand and social-first content potential
- Clear student-athlete use case
- Lower-waste sourcing story

Weaknesses

- New brand with no national awareness
- Chilled product needs reliable cold-chain handling
- Shelf life is shorter than powder or ambient products

Opportunities

- Gym and cafe fridge partnerships
- Campus and event pop-ups
- Seasonal flavours and multipacks
- Corporate and sports-team catering

Threats

- Large beverage brands can copy the format
- Fruit input prices may spike
- If demand grows too fast, stock-outs could frustrate early fans

9 Ansoff Matrix

Market Penetration

Sampling, gym challenges, stamp cards and bundles to lift repeat purchase in existing channels.

Product Development

Add a lighter breakfast blend, a plant-protein option and seasonal flavours once MVP demand is proven.

Market Development

Move from school and local gym sales into universities, office fridges and regional cafes.

Diversification

Extend into smoothie bowls, frozen pops or high-protein fruit shots if the brand earns trust.

10 Marketing Assumptions

- Customers will value a fruit-forward flavour profile enough to pay more than standard juice.
- Local gyms, cafes and school/community sites will support a chilled functional drink from a youth-led brand.
- Small-batch chilled production can meet demand without causing frequent out-of-stocks.
- Short-form video, sampling and UGC-style content will outperform static poster advertising.
- Demand will be strongest around morning routines, lunch breaks and post-workout occasions.

10 Marketing Assumptions

- Customers will value a fruit-forward flavour profile enough to pay more than standard juice.
- Local gyms, cafes and school/community sites will support a chilled functional drink from a youth-led brand.
- Small-batch chilled production can meet demand without causing frequent out-of-stocks.
- Short-form video, sampling and UGC-style content will outperform static poster advertising.
- Demand will be strongest around morning routines, lunch breaks and post-workout occasions.

11 Marketing Objectives

- Reach 2,340 bottle sales between April 1 and September 30, 2026.
- Grow Instagram and TikTok to a combined 1,500 followers and collect 400 QR or email sign-ups by August 31, 2026.
- Achieve a repeat purchase rate of 35% by September 2026 through bundle offers and a digital stamp card.
- Convert at least five stockists and keep at least three of them reordering every month by the end of Term 3, 2026.

12 Marketing Mix: Product and Price

Product

- 330ml chilled bottle with 20g protein and real fruit flavour.
- Three launch flavours designed to feel closer to juice than a standard shake.
- Recyclable packaging with bright colour coding and simple front-of-pack nutrition cues.

Price

- Recommended retail price: NZD 6.50 per bottle.
- Bundle offer: 3 bottles for NZD 17.50 to encourage repeat use.
- Indicative wholesale price: NZD 4.90 for stockists ordering chilled cases.

Gross Margin Snapshot

Variable cost per bottle: NZD 2.45

Retail price: NZD 6.50

Gross profit per direct sale: NZD 4.05

12 **Marketing Mix: Promotion and Place**

Promotion

- Weekly TikTok and Instagram Reels showing flavour, lifestyle and post-workout moments.
- Sampling at school events, gyms and weekend markets.
- QR-led launch offers, micro-influencer seeding and a 7-day recovery challenge.

Place

- School or campus pop-up sales during peak breaks.
- Local gym fridges and selected independent cafes.
- Weekend market stalls and pre-orders through the website or Instagram DMs.

13 **Sales Forecast**

Forecast rationale: sales ramp up as awareness, stockist coverage and repeat purchase improve. The first six months are forecast to deliver 2340 bottles, with the strongest months expected once gym, cafe and campus channels are all active.

14 Contingency Plans

- If sales lag, shift budget into high-conversion tasting events and offer a cheaper 250ml trial bottle.
- If one flavour underperforms, reduce its batch size and replace it with the best-performing seasonal fruit blend.
- If fridge stockists sell slowly, move more volume into pre-order packs, sports events and school collection points.

15 Marketing Action Plan

Month	Actions
March	Finalise recipe, label design, pricing and first stockist conversations.
April	Launch on campus, post daily launch-week content and run first tasting stand.
May	Secure gym fridge placement and push the 3-pack bundle offer.
June	Add cafe channel, publish UGC testimonials and run recovery challenge content.
July	Trial winter flavour drop and expand to a second gym or sports club.
August	Focus on repeat purchase through loyalty and stockist re-orders.
September	Review performance, refine flavours and prepare next-term scale plan.

16

Marketing Budget

Budget item	NZD
Launch tastings and sample cups	95
Social ads and boosted content	150
Posters, fridge wobblers and QR cards	120
Photo and video shoot materials	80
Website domain and launch collateral	45
Transport and chilled merchandising	75
Budget priority is front-loaded into launch sampling and social content because early taste proof and visual storytelling are the fastest ways to earn trial.	

17 Plan for Monitoring Sales

- Track weekly sales by channel, flavour, time slot and average order size in a shared dashboard.
- Review repeat purchase, sell-through by stockist and social content conversion every Friday.
- Run a short customer feedback poll after each tasting event and after every new flavour release.
- Use monthly meetings to compare forecast versus actual sales and decide whether to scale, reprice or rebalance channels.

Weekly Dashboard Fields

Units sold by flavour | units sold by channel | conversion from sampling | repeat purchase | stockist sell-through | social saves, clicks and QR scans
